

# Fulton Standard Efficient Gas or Oil Fired and Combination Gas/Oil Fired Steam Boilers

4, 6, 10, 15, 20, 30, 50, 60, 80 and 100 BHP, up to 300 psi

With the invention of the vertical tubeless boiler Fulton continues after 45 years to be the leading U.S. manufacturer of this type of boiler. Well over 100,000 boilers have been produced and distributed world-wide since 1949. Every Fulton boiler is built and stamped to ASME Code and registered with the National Board of Boiler and Pressure Vessel Inspectors. Fulton boilers are also UL listed packaged boilers and CSA approved.

A vertical tubeless boiler is of relatively simple design offering years of trouble-free operation.

Many Fulton boilers over 30 years of age are still in operation today. There are no tubes or coils to rust or burn out periodically, therefore, no retubing costs, no downtime. No downtime means reduced plant operating costs. Fulton features its own designed and manufactured top mounted down fired forced draft burner which is far superior to most other

burner designs and offers the highest fuel efficiencies possible.

**These complete packaged boilers are fully assembled, trimmed and test fired at the factory before shipping.**

Fulton's commitment to continuous product improvement is reflected in the efficiency, quality, and ruggedness of these superior standard fuel fired boilers and the Fulton EnergyPak boilers.
