Teflon Shoes

Valet Package

Seickel & Sons Mini- Package is a self contained pressing unit consisting of a manual Utility press, a Reimers 20kw steam generator, and a Rema vacuum. These 3 pieces together make a high quality, easy to use pressing package that is hard to beat. Unlike other self contained units, our unit is individual pieces that can fit through doorways and into tight rooms. The whole package fits neatly into a 7 foot by 5 foot space. All packages come complete with a new press table, pad and grid plate for the machine.

Self Contained pressing unit completely pre-piped ready for on-site connections.

Optional Equipment:

- ⇒ Steam iron
- ⇒ Head insulator
- ⇒ Blowdown flash tank
- ⇒ Automatic drain system for steam generator
- ⇒ Setup on-site

Required Utilities on Site:

3 Phase Electric for generator
110v control for generator and vacuum
1/2" water connection
2" vent to atmosphere

Manufacturers Representatives for:

- Reimers Electra Steam

ABOUT US

Seickel & Sons is a family owned and operated business for over 60 years in the garment industry. We specialize in steam pressing equipment for manufacturers, dry cleaners, tailors and valet service. Our years of dedicated service in this

industry have earned us the title of Expert. We offer consultations on layouts for new or existing rooms, equipment evaluations and recommendations on new equipment.

We refurbish our own equipment using top quality parts for years of trouble free

service.

Unlike many other sales companies, we service and support everything we sell. We have our own service fleet as well as a nationwide network of technicians who are trained in servicing our equipment.

High end clothing retailers, custom clothiers, master tailors and some of the finest hotel valet shops in the world all have one thing in common. They all use Seickel & Sons Inc. for their pressing equipment needs.

Here is Why.....

PRESSING EQUIPMENT

Pressing work rooms are an essential part to every successful business. Providing a customer with a good looking garment will bring them back to your store again and again.

The finish of the garment is the first thing the customer will notice. The more valuable the garment, the more attention needed on the finishing of the garment.

Don't be fooled by fancy, expensive equipment. Automated equipment is designed for manufacturing facilities where every piece is the same, with the same problems and requiring the same finishing. In a custom work room,

The right equipment will make your garments look great.

not every piece and finish will be the same. The operator needs to be able to control the machine, not the machine controlling the operator. The more simple the machines can be kept, the easier they are to operate and they are also more reliable.

THE IRON

Even the smallest of work rooms needs an iron setup. A high quality iron and a Teflon iron shoe will make for a nice finish on your customers garments. The perfect solution for a smaller shop is to have a mini boiler with an iron setup. This is a portable unit that can sit on top of your work table. These are industrial units that

"The perfect solution for a smaller shop is to have a mini boiler and iron setup"

are designed to work all day long without trouble. The boiler holds about a 3/4 gallon of water and produces enough steam for about 5 hrs of continuous use. The quality of steam and consistent temperature from this industrial iron setup will produce a much better finish than a standard

household iron.

Many tailors prefer the older heavy steam electric irons but have been told these no longer exist. We have a full line of rebuilt irons in stock including the heavy steam electric irons. We can rebuild your old irons. We also have a line of brand new, traditional style 6 and 9lb steam electric irons in stock.

THE PRESS

The pressing machine is a major part to the work room. The pressing machine can add the perfect finishing touches to your garments. Pressing machines come in all shapes and sizes depending on what type of work you are doing. The basic press, the 42" manual utility press is the workhorse of the alteration room. It can handle mens, ladies, and children sized garments including pants, shirts and jackets.

Another useful piece is a Vacuum table. The unit pictured on the right is a flat

42" Manual Utility Press. The workhorse of the work room.

table with an interchangeable buck for different shapes including sleeve and utility shapes. The units have a self contained vacuum to hold down and dry the garment during ironing.

This unit works well with the mini boiler and iron setup.

THE MINI-PACKAGE

Don't let the name fool you. The mini package is not so mini. It consists of a manual 42" utility press, a Reimers Electra Steam generator and a Rema Vacuum. This self contained pressing system is big enough to handle your entire work room needs, but small enough to be able to fit in a 7 foot by 5 foot space.

The system will arrive on site with all necessary interconnect piping provided. On site utilities needed to complete the installation are:

- ⇒ 3 phase electric for the steam generator
- ⇒ 110v control power for generator and vacuum.
- ⇒ 1/2" water connection
- ⇒ 2" Vent to atmosphere

Self Contained Mini Package shown with a 42" manual utility press

The basic Mini Package includes:

- * 42" Manual Utility Press with a new table, press pad and grid plate.
- * Reimers Electra Steam 20kw 3 phase electric steam generator
- * Rema Vacuum Dryer

Optional upgrades:

- * Steam Iron
- * Head and buck insulators
- * Blowdown Flash Tank
- * Auto drain and flush for generator
*Blowdown tank required
- * Ultima Press Pad and Plate

The Ultima Product Line – The *Ultimate* in finishing products

THE PADDING

This is probably the most important part of proper garment finishing. Remember, the press pad, press plate and iron shoe are the pieces that will come in direct contact with the garment. It is here that the most attention to detail is needed and quality products should be used. Don't run the risk of damaging a high end garment with a low end pad or plate.

“Don't run the risk of damaging a high end garment with a low end pad or plate.”

Grid Plate– The top plate on your pressing machine. We offer our exclusive **Ultima soft top grid plate** for your machine that will not crush the fabric, will not leave impressions, and will not leave a shine on the fabric.

Press Pad– It is recommended to replace your press pad every few months to maintain the cushion. When the pad gets too hard, impressions

are made in the clothing, the vacuum decreases and the steam decreases. We offer our **Ultima press pad**, which has extra padding to further reduce impressions and protect the expensive fabrics. The vacuum and steam dispersal is also superior to other pads.

Iron Shoes– Teflon coated iron shoes mount to the bottom of the iron to protect the garment from being burned, without compromising the function of the iron. Steam flows through the shoe and heat still transfers through to shoe to touch up the garment.

THE EXTRAS

The small items can make a big difference in the final appearance of any garment and make the job of the person doing the work that much easier.

Insulators– The surface of a pressing machine can reach over 300 degrees. By installing an insulator on the machine, that temperature will be greatly reduced. This will protect the operator from chances of being burned, reduce excess heat in the room, and save money from

the reduced heat loss.

Iron Parker– A fabric covered iron rest to help protect the iron and shoe from being damaged. The padded rest with sides helps keep the iron from falling, and having the Teflon shoe damaged.

Table pads– Our table pad is perfect for doing touch up ironing. It is a thick pad with our **Ultima** fabric covering that can be placed on a table to iron on. When

you are done with it, just put it away. A perfect solution for a multipurpose table. The work surface is a generous 24"x36".

Sleeve pads– Your arms are not flat, so why iron on a flat surface. Our sleeve pads are designed to take the shape of the sleeve while you iron or press. The package comes with 3 sizes of sleeve pads.

No matter how good the products are, they are worthless unless the company that sells and supports them is reliable.

Since 1938, Seickel & Sons has relied on its customers to be their best salesmen. We are a family owned and run business. We pay attention to every little detail so you don't have to. Our experience, professionalism and reliability are second to none.

We have a full service parts department and showroom with equipment on display. We are easily reachable from Interstate 78, NJ Turnpike and the Garden State Parkway. We are 20 minutes from Manhattan and 5 minutes from Newark Airport.

Give us a call today to discuss what we can do for you.

THE PARTS AND SERVICE

We have a fully stocked parts department. Many companies rely on major warehouses to stock items and there is always a delay in getting parts. Down time costs everyone money. We minimize downtime by having parts available for immediate shipment. We ship parts orders daily and have overnight shipping available. We have many obsolete and hard to find parts and many used and refurbished parts available. We stock replacement parts for:

- Hoffman and New Yorker steam presses
- Reimers Electra Steam boilers and irons
- Sussman Hot Shot boilers
- Cissell products
- Ace-Hi Irons
- Rema Vacuums
- Burks Pumps

→ Plus, all of the supporting valves, traps, solenoids, and other related items. If we don't have it, then you don't need it!

Some of our rebuilt irons and Reimer Jr. Boilers in stock

We are also a fully staffed service department with factory trained mechanics on the road and parts with them. We make every attempt to provide same day service for our customers.

We are not just a local service center. We have a nationwide network of service technicians who are specialized in this industry to call upon. Our customers are our number one priority and we will make every attempt to make sure you are up and working as quickly and smoothly as possible.

We also offer in-house iron repairs. Send us your iron and we will repair it. We also repair mini boilers including the famous Reimer JR model.
